OBJECTIVE

Software Engineer with 4+ years of experience in backend developing and ETL pipelines, seeking full-time Python or Golang roles.

EDUCATION

Bachelor of Computer Science

Applied Mathematics and Informatics specialty

National Research University Higher School of Economics

PROGRAMMING SKILLS

Preferred Languages	Python, Go
Technologies	Git, Bash, SQL, NoSQL, Spark, Docker, Elasticsearch, Redis
Frameworks	Flask, Django, PyTest, Pandas, NumPy, Asyncio, FastApi

LANGUAGES

Russian	Native
English	Upper-Intermediate (B2)

EXPERIENCE

Go Developer SIT Alemira	March 2022 - Present <i>Moscow, Russia</i>
------------------------------------	---

Helped to implement from scratch high-load LMS platform with native support for adaptation. My team was responsible for developing:

- Quiz passing block
- Quiz and Questions bank
- Admin and Instructor panels
- Student's personal account page

Stack: Golang, AWS, DynamoDB, etcd, gRPC

Python Developer Yandex N.V.	Jan 2020 - March 2022 <i>Moscow, Russia</i>
--	--

Yandex Lavka, product's delivery company. I worked on Autoorder service. My primary tasks:

- rewrote the whole code from scratch, helped to develop a new fast architecture
- moved all the logic from adjacent teams to our own code, to make our service more stable and consistent

- integrated international sources and suppliers to our service, started to use Autoorder in all cities

Stack: Python (NumPy, Pandas), PostgreSQL, Docker, Spark, lots of Yandex tools

Python Developer

AppScience

June 2019 - Jan 2020

Moscow, Russia

Implemented lots of stuff for chemical and biological startup:

- ERP platform for Supply and Procurement teams
- Telegram bot with notifications about shipping updates
- Telegram bot with notifications about new deals
- Tool for synchronization between DB and sheets platform (AirTable)

Stack: Python, FastAPI, SQLAlchemy, Docker, AirTable, Telegram API, Github Actions

Intern Full-Stack Developer

Yandex N.V.

Nov 2018 - June 2019

Moscow, Russia

During an internship in Search department, I was responsible for internal asynchronous and distributed web service for tracing search requests (SETrace). It is a popular and useful tool for Search and Alice developers that helps them with debugging. My primary tasks were:

- rewrite legacy code
- implement new webpage for searching all errors on some host for given time interval
- implement functionality and documentation to make adding new service to SETrace easier
- general optimization, fixing memory leaks bug in DB and so on

Stack: Python, Flask, Gevent, MongoDB, Zookeeper and a little HTML, JavaScript

TEACHING EXPERIENCE

Math Teacher Assistant

Education center “Sirius”

July 2019

Sochi, Russia

Checked and evaluated assignments on combinatorics and geometric courses
